# 2017 Ford Super Duty & OEM Trailer TPMS

Like the 2014+ Ram 3500 Dually, TPMS will be found on the 2017 Ford F350 DRW model and all F250's and F350's with TPMS will have a tire pressure display screen as an option.

To prevent sensor cross-talk between the Rear Outer and Inner wheels during the relearn procedure, it is recommended by Ford to remove the Outer wheels prior to starting the retraining process and trigger them a short distance away from the Inner wheels.

## An Industry-first, however, is the optional Trailer-mounted TPMS.

The Trailer-mounted TPMS is an option when the Trailer-mounted, back-up camera option is purchased. The recipient receives the parts in a box and it is up to them to have the sensors installed at a TPMS-educated tire shop.

The clamp-in TPMS sensors are valve mounted and the system can be set up to monitor 2, 4, or 6 tires at a user-designated tire pressure. Due to the sensor's sleep mode, a stationary or spare tire cannot be monitored.
